

Professional Summary

- Fifteen years of IT experience specializing in software architecture, design, development of enterprise-scale, cloud-native distributed applications using **Spring Boot 3.x, NodeJS v23 , Python 3.x, REST, microservices , React 19, Angular 20, Linux, Docker, Kubernetes, Oracle Cloud, Azure & AWS.**
- Currently serving as **Principal Engineer** at **Oracle, USA** with over a decade of extensive experience in USA in different technical roles.
- Deep expertise in **OCI technologies** like Compute, Networking, Storage, API Gateway, Load balancer, serverless function, stream, queue, Oracle Kubernetes Engine, OCI cache, APM, Logging, Logging Analytics, APEX, Oracle DB SQL, PL/SQL etc..
- Hands-on experience architecting and deploying **AgenticAI** and **GenAI** solutions for real-world enterprise applications.
- Experience in writing skill files for OpenAI CodeX for code development, build and deployment workflows.
- Proven track record in developing scalable microservices using Python FastAPI, Node, Spring Boot and GraphQL for advanced API orchestration.
- Experienced mentor and technical leader, dedicated to driving high-quality, on-time delivery through cross-functional team collaboration.
- Deep mastery of design patterns, non-functional requirements (NFRs), and industry best practices.
- Architected automated CI/CD pipelines using SCM, Jenkins and OCI DevOps for seamless workload deployment to Oracle Kubernetes (OKE).
- Advanced proficiency in Agile, Scrum, and Iterative methodologies to streamline the software development life cycle.
- Broad domain expertise in Enterprise Engineering, Automotive, Social Media, Web Content Management, and Collaborative Learning platforms.

Certifications

- Oracle Cloud Architect Associate
- Oracle GenAI professional
- Oracle observability professional
- Certified Kubernetes Application Developer

Professional Experience

Company	Oracle
Project	Employee PulseGuard
Role	Principal Engineer
Duration	Oct 2025 – till date

Oracle Employee PulseGuard application is an AgenticAI app which runs on every employee device which tracks all system related possible issues proactively and integrate with OCI GenAI and Oracle enterprise MCP tools for getting identified issues related action plans for remediating the issue automatically. If agent can't fix issues then it raises JIRA ticket for manual support. Employee also has option to chat with agent via desktop app in case agent fails to detect issues. **60% of manual handled support tickets automated using the tool** which helped to cost savings and reduced cycles between employee and support team.

- Led the development of Employee PulseGuard, an Agentic AI solution deployed across 170k+ enterprise endpoints to proactively remediate system issues, achieving a 60% reduction in manual support tickets.
- Designed DB model for data persistence for storing issues reported, action plans, audit data, etc..
- Developed distributed cache (warm) component with OCI Cache and Python FastAPI for improving performance and reducing hits to GenAI service for getting user conversation history for full context
- Built CI/CD pipelines using Docker and OCI DevOps for hosting into OCI Kubernetes environment
- Implemented observability using OCI Application Performance Monitoring (APM), OCI Logging and Logging Analytics. The metrics rendered in Graphene dashboards.

Environment:

Oracle ADK, Python, FastAPI, React, OCI DevOps/ Logging / Logging Analytics, OCI Cache, OKE, Oracle DB, OCI GenAI

Company	Oracle
Project	Zoom Rooms Autopilot (ZRA)
Role	Principal Engineer
Duration	Feb 2025 – Sep 2025

The system monitors 1,300+ global Zoom Rooms (Logitech/Poly) to ensure maximum uptime. The system identifies hardware faults proactively and triggers automated resolution protocols. Manual intervention is reserved for complex failures, where the system automatically logs a service ticket for the Ops team to investigate. The system helped to reduce service tickets **by 80% resulting in an estimated \$2M in annual operational savings.**

- Have done technical design and architecture end to end, it includes microservices layer in backend for decoupling workers for issues analysis, automated resolution, support tickets, and notifications.
- Led React UI components hierarchy design
- Developed backend API and OCI Queue integration with Spring Boot and workers async integration with serverless function.

- Implemented observability using OCI Application Performance Monitoring (APM), OCI Logging and Logging Analytics. The metrics rendered in Graphene dashboards.
- Strategized load/performance testing and involved in performance optimizations.
- Partnered with security for PEN testing.

Environment:

React, Spring Boot, OCI Queue, OCI Function, OCI DevOps/ Logging / Logging Analytics, OKE and Oracle DB.

Company	Oracle
Project	IT AI Service Desk
Role	Principal Engineer
Duration	Nov 2023 – Feb 2025

Oracle IT Help Service Desk powered by AI system enables employees to report issues via Slack by sending a message. Slack is integrated with Oracle Digital Assistant which routes messages to OCI GenAI for replying to employee with appropriate details for helping issues resolved. After a few attempts, if AI is unable resolve the option, then prompts employee for submitting a ticket from Slack itself. After that, Slack and JIRA are integrated for sharing messages between employee and support engineer. **The system helped to reduce tickets to support engineers by 30%**

- Involved in design, development and release phases
- Developed integration layer for JIRA for ticket creation
- Setup Oracle Digital Assistant for routing requests to different channels like OCI GenAI, Slack, JIRA, etc..
- Documented application architecture, design, developer onboarding, user manuals, etc..
- Implemented observability using OCI Application Performance Monitoring (APM), OCI Logging and Logging Analytics. The metrics rendered in Graphene dashboards.

Environment:

Python FastAPI, OCI DevOps/ Logging / Logging Analytics, OCI Cache, OKE, OCI GenAI, Open Search

Company	Oracle
Project	Enterprise Meeting Scheduler
Role	Principal Engineer
Duration	Aug 2022 – Oct 2023

Different Oracle orgs were using third party products like Calendly, MS Bookings for scheduling meetings with external users like customers, vendors and partners. The home grown Enterprise Meeting Scheduler application replaced all the third party products usage and saved ~ 4Million dollars. The system enables external users to meet with Oracle employees without back and forth for agreeing on time for meetings. It also contains various features like individual meetings, group meetings, group meetings with round-robin, etc..

- Involved in requirements analysis, design, development and release phases

- Developed key UI components with React for front end and backend microservices with Spring Boot.
- Developed Oracle Database backend PLSQL packages, procedures and functions
- Setup API Gateway for backend APIs in OCI and security with IDCS OAuth

Environment:

React, Spring Boot, Docker, OCI DevOps/ Logging / Logging Analytics, and OKE

Company	Walmart
Project	Walmart Academy App
Role	Staff Engineer
Duration	Dec 2019 – Aug 2022

Walmart Academy app is the learning management system (LMS) for Walmart associates in USA. The app facilitates self-training for nano/micro learning, compliance trainings, instructor led trainings, etc. The app is available in desktop web, and as mobile app for BYOD and corporate devices (Android & iOS).

- Involved in full cycle (requirements analysis, design, development, release, etc...) of application
- Worked on system and technical architecture, reviewed by security & risk analysts for approval.
- Designed the app with single UI codebase for Web and mobile apps using modern tech stack React and Ionic Capacitor (native mobile runtime library)
- The app developed for 1.6 million Walmart stores associates and extensible in future for SAMs and Walmart international.
- The app is integrated with AEM for nano and micro courses and Moodle for SCORM courses.
- Implemented backend services with GraphQL; leveraged schema language concepts, API orchestration, etc..

Environment:

HTML5, CSS3, JS(ES2017), React, Ionic Capacitor, Node.js, REST, GraphQL, Azure Cloud and DevOps, Azure SQL, services), Badgr & Azure AppInsights

Company	Walmart
Project	Teams App
Role	Staff Engineer
Duration	Mar 2019 – Nov 2019

Teams' mobile app contains teams' functionalities in Stores; Store managers can track different metrics of teams in their store. Metrics like tasks, sales, etc.

- Worked on system and technical architecture, reviewed by security & risk analysts for approval.
- Mentored team to upskill React developers to work on React Native. This was first React Native project in the Learning area of Walmart.
- Worked with mobility team and understood the app release process to BYOD and corporate devices of 5000+ stores in USA.
- Built common components for reuse in other apps.

Environment:

React Native, Node.js, SQL Server, iOS, Android

Prior Roles –

Company	Hyundai Motors, USA
Project	Hyundai, Genesis and Kia marketing apps
Role	Technical Lead
Duration	Nov 2016 – Feb 2019

Company	DellEMC, USA & India
Project	Collaborative/Social Media Platforms
Role	Senior Engineer & Technical Lead
Duration	Nov 2010 – Sep 2016
